SKILLS

PHP

Object-oriented programming (OOP) - Autoloading - File - Cookie -
Session - Regex - MVC

Laravel

Restful API - Eloquent ORM - Query Builder - Gate and Policy -
Notification - Factory - Blade Component - job

Database

MySQL - ERD - SQL Queries

Web Design

HTML5 - CSS3 - Flex and Grid - Bootstrap - Tailwindcss

Software Design

Repository - Factory - Facade - Singleton

Other

Networking basics - Version Control(Git) - Github - Linux basic

PROJECTS

Snapp Food

There is an application similar to SnappFood built with Laravel, consisting of three parts: 1- Seller 2- Buyer 3- Admin. Overall, the application has only one admin who is initially created manually. Each individual can create a restaurant with their own name and password. The buyer section is entirely written as an API, which can be tested using a tool like Postman
